1941 AGRICULTURAL CONSERVATION ASSOCIATION

WASHINGTON

Forward

The State of Washington is one of the leading agricultural states, with the highest production in apples, raspberries, blackberries, cabbage, turnips, and pea seeds, and ranks near the top in the production of dry peas and canning peas, cherries, cranberries, hops, potatoes, and wheat. In natural scenery this state is second to none.

To appreciate the application of the Agricultural Adjustment Administration in the state it would be helpful to take a bird's eye view of the topography. Divided by the Cascade Range, which separates the state, we have two distinct divisions, Eastern and Western Washington. Agricultural in Western Washington consists mainly of dairying, small fruits, and poultry. The climate is influenced by the Pacific Ocean, and annual precipitation varies from 15 to 125 inches. Nineteen counties compose this area, varying in size from San Juan, with 110,080 acres to the largest county, Lewis, which has a land area of 1,566,088 acres. Eastern Washington is composed of 20 counties, varying in size from Asotin, with a total area of 401,280 acres, to Okanogan, with a total area of 3,388,800 acres. Wheat, peas, cereal crops, livestock, and fruit are the major crops.

When the nation's call came for the farmers to shift from normal production to a war time production to meet the requirements of "Food for Freedom," Washington farmers accepted the challenge and have demonstrated that they will gladly work with their brother farmers of the United States in mobilizing their strength in behalf of war efforts to preserve our democracy.

PART I ACP PROGRAM

Early in 1941, when it was apparent that wheat marketing quotas might become applicable for this crop year, all county offices made efforts to secure farm records, acreage allotments and yields as complete as possible. As a consequence, when farmers realized the importance of the national referendum on Wheat Marketing Quotas, it was possible to secure a better worksheet coverage and more complete farm records than it was possible to obtain before. This factor, along with greater interest in range practices, made it possible to cover by worksheets a total of 14,801,439 acres of farmland and 6,832,228 acres of cropland. This is an increase in worksheet coverage over 1940 farmland and cropland acreages of 3,624,419 acres and 187,592 acres respectively.

There was a slight increase in the number of farms carrying out soil building practices over 1940. Of the 31,281 farms performing one or more practices in 1941, as compared to 31,133 carrying out practices in 1940, a total of 69,401 practices were performed as compared with 68,738 practices in 1940.

Analysis of the grass and legume seeding practices carried out in various counties indicates that the seeding of such crops during the past few years on complying farms is reaching the maximum that farmers wish to carry and still maintain a sound rotation system. Many farmers are now carrying between 12 and 15 percent of their cropland in perennial grasses and legumes. The difference between this acreage and the acreage required to stay within their total soil depleting allotment has been seeded or deferred to annual soil conserving or soil building practices. Therefore, although the acreages of grass and legume seedings carried out in 1941 may appear limited, the total acreage of such seedings has increased because most of the previous years' seedings have been maintained.

PART II PARITY PROGRAM

The regulations which allowed partial payments to eligible participants who had overseeded their allotments permitted very few additional parity payments over those which were made to regular compliers. The 6627 participating farms earned 58% of the maximum parity payments that could have been earned in the State of Washington. This amounted to \$2,220,464.

PART III 1941 COMMODITY LOAN PROGRAM

The 1941 wheat loan program was quite popular with wheat growers of our State, which resulted in a much larger participation of wheat being placed under loan for 1941 than was under the program in 1940. This increase in loan participation was due largely to the fact that the cash market price did not follow the loan price of 1941 as closely as it did in 1940.

Appreciation of the loan program has been increasing steadily as businessmen, as well as farmers, realize the value of this program in the face of world conditions and huge supplies.

The number of certified wheat loans in 1941 was 8,515 representing 22,218,075 bushels. Thirty-six percent of Eastern Washington's wheat production of 60,823,116 bushels was placed under loan in 1941. There were 7,697 commercial storage loans and 818 farm storage loans representing 18,660,737 bushels and 3,558,005 bushels respectively.

A large percentage of this wheat under loan was taken over by Commodity Credit Corporation, as farmers were not interested in redeeming their wheat due to the general market level. Many farmers released their equity in the wheat to facilitate the feed wheat program.

The amount of farm storage for 1941 greatly exceeded the amount of farm storage of any previous year. This was brought about by encouraging farmers to provide storage on their premises.

Seventeen loans were certified under the barley loan program representing 32,522 bushels.

Washington State wheat growers have high regard for the loan program realizing that it places a floor under the price level, without which the market would collapse. It is expected that a larger volume of wheat and barley will be placed under loan for 1942, as a greater percentage of the farmers who grow these commodities are complying with the farm program.

PART IV CROP INSURANCE

With another year completed we believe that considerable progress has been made in the administration of this integral part of the National Farm Program. Since its inception in 1939, the crop insurance program has expanded each year with respect to the number of contracts executed, bushels of wheat guaranteed to the farmers, and premiums collected.

In 1941, 425 more contracts were written than in 1940. The total bushels insured production increased from 5,313,934 bushels in 1940 to 5,465,448 bushels in 1941. More crop insurance policies were sold to producers on smaller farms in 1941 than in 1940. The indemnities paid in bushels decreased from 186,295 bushels paid in 1940 to 116,447 bushels paid in 1941. For the three years 1939 through 1941, the percent of indemnities paid to premiums collected has reduced from approximately 100% in 1939 to 82.4% in 1940 and 50.6% in 1941. The State of Washington has built up indemnity reserves in three years of better than 153,000 bushels.

Considerable study has been made by county committees during the past three years of yield and rate structure and it is felt that much has been accomplished to get fair and equal distribution of wheat yields and premium rates among all wheat farms in the state.

The regulations which make it necessary to purchase insurance on a farming unit basis were found to be very desirable for 1942 and in spite of an early closing date, which made it necessary to sell crop insurance to farmers during their harvest season, this state has shown a very favorable increase in 1942 over 1941.

Because of high yields in 1941 and very favorable conditions going into the 1942 crop year, wheat farmers were somewhat doubtful as to the necessity of purchasing all-risk insurance in 1942. However, in spite of these factors, definite increases are shown in the number of ACP contracts approved (in relationship to worksheet contracts for previous years) and the total insured production.

Prior to 1942 only 19 of the 20 counties of Eastern Washington were participating in the program. As of 1942 we wish to welcome Chelan County as a participator, making all counties east of the Cascades a unified group in respect to being able to guarantee Food for Freedom.

PART V SUGAR BEET PROGRAM

The district sugar beet committee composed of six committeemen allotted 12,513.7 acres to sugar beet growers in the sugar beet producing counties of the State: namely; Benton, Franklin, Kittitas, Walla Walla, and Yakima. Of the allotted acreage 11,760.1 acres were planted and 11,396.4 acres harvested for processing.

For a time, it appeared that there would not be enough labor available to harvest the beets, but the growers were able to harvest all of the beets with the exception of those which were purposely abandoned.

The district average sugar content in 1941 was 16.26% compared to 15.29% in 1940.

Compliance with the wage rates and the child labor provisions of the Sugar Act of 1937 was excellent as there were no wage claims filed nor any reports of child labor violations.

PART VI 1941 MARKETING QUOTA PROGRAM

The announcement by the Secretary of Agriculture that wheat supplies in the United States were such as to warrant the calling of the National Referendum of wheat farmers on Wheat Marketing Quotas for May 31, 1941 focused the attention of all wheat growers on our wheat problem.

Farmers in the United States were faced with a carry-over from 1940 of between 385 million and 400 million bushels and prospects of a very good crop in 1941. It was evident that this nation would be faced with total wheat supplies of approximately 1,250,000,000 bushels as of the first of July 1941, whereas our normal domestic consumption or disappearance of wheat, plus our exports, plus a 35% carry-over, would amount to approximately one billion bushels.

In spite of the fact that the wheat referendum was held after the 1941 crop was seeded, wheat farmers in the State of Washington voted 93.6% in favor of Wheat Marketing Quotas in 1941. This vote was especially favorable inasmuch as later reports indicated that, of approximately 2,250,000 acres of wheat seeded for the 1941 crop, 398,000 acres were seeded in excess of the wheat acreage allotment.

Reports from the field in the spring of 1942 indicate that those farmers with excess wheat in 1941 are, in a majority of cases, seeding within their wheat acreage allotment and in many cases underseeding their allotment so as to decrease and release their 1941 farm marketing excess.

PART VII MISCELLANEOUS TABULATIONS

CONSERVATION MATERIALS

SUPERPHOSPHATE

Superphosphate is the heart of the AAA Program in Western Washington, but when superphosphate was first offered as a conservation material in 1939, farmers had to be induced to sign orders as they were skeptical of the value of the material.

In 1940, and even more so in 1941, farmers were very eager to place their superphosphate orders. In 1941, approximately 10,750 tons of 20% superphosphate were delivered to farms in Western Washington, Kittitas, and Klickitat counties. In addition, 265 tons of triple superphosphate was distributed in three Western Washington counties.

To fully realize the concrete value and successful evidence of the use of this material, one must hear the indorsements from the farmers themselves. Typical of these is the farmer who will show you his pasture. One side will be eaten down practically to the roots, whereas the other side, although lush and green, has barely been touched. His answer is that the livestock will eat all the available grass on the ground to which the superphosphate has been applied before they commence on the grass which has not received the application of superphosphate.

PEAS & VETCH

Austrian winter pea seed and vetch seeds were distributed as conservation materials in the fall of 1941. In several counties, orders were immediately placed indicating that farmers are anxious to secure another cash crop. With wheat production being reduced, Austrian winter pea acreage will undoubtedly increase to a marked degree in various Eastern Washington Counties.

Vetch seeds were distributed in Western Washington Counties where the conditions are favorable for its production.

COTTON MATTRESS AND COMFORTER PROGRAM

The cotton mattress and comforter program was inaugurated in all of the 39 counties in the State of Washington. The program was carried out in the counties with the assistance of the County Agent, County Home Demonstration Agent, and the Cotton Mattress Committee.

In all counties, cotton-mattress centers were established under direction of the Cotton Mattress Committee, and mattresses and comforters were made under supervision of the County Agent and Home Demonstration Agent. Participants in the program made their own mattresses and comforters, and they also bore the cost of materials other than the cotton, ticking, and percale.

When the program is completed, there will probably be over 13,000 mattresses and 10,000 comforters made by participants.

PART VIII. ACP FARM PROGRAM SUMMARIES

These tables show comparisons of ACP Program results for the years 1936 through 1941.

GENERAL AND EDUCATIONAL PROGRAM

America's call for full mobilization of the "Farm Front" to bolster her defense against the forces of aggression increased the responsibilities and activities of the AAA in 1941. Greatly expanded educational and informational procedures were made necessary to keep pace with the rapidly changing sequence of events.

It was very evident, before our active participation in the war, that the United States would be called upon to furnish, not only arms and munitions, but foods and other vital agricultural products necessary to sustain the life of all nations fighting the aggressors. A gigantic production job was accepted by the American people. The AAA, along with other bureaus of the Department of Agriculture, was asked to accept leadership in organizing farmers of this nation to produce food crops and other vital agricultural products necessary to meet the increased requirements of the allied nations as well as our own. To carry out this gigantic task it was necessary to take inventory of our production facilities and inform farm people of the necessity for producing those agricultural crops and products necessary to meet the goals set by the Department of Agriculture.

Farmers who remember the conditions that followed the first world war fully realize the importance of a stabilized agriculture even though it must, of necessity, be geared to increase production because of our war efforts.

An extensive educational program was carried out by the State and County AAA Offices. Conservation of soil resources was stressed as being the foundation of a sound and economical agriculture. Farmers who had carried out good soil building practices in past years, as encouraged by AAA, are now reaping the benefits derived from such practices.

Farm people were informed of the importance of wheat marketing quotas, which assured them of a fair share of the wheat market at prices stabilized by "85% of parity" loans. Better informational methods allowed more farmers to understand and appreciate the benefits of federal all-risk crop insurance which gave every producer the assurance that he would have a wheat income regardless of rain, hail, fire, and other hazards that could affect his normal production.

The results of surveys made on grain storage facilities were announced so that farmers would fully realize the importance of obtaining or preparing storage space for their crops.

Every available medium of information contributed to the educational program, notably the weekly newspapers and radio stations which serve rural areas. Among the radio stations whose facilities were made available for AAA Programs were KWSC, Pullman; KHQ and KGA, Spokane; KIT, Yakima; KPQ, Wenatchee; KRLC, Lewiston; KIRO, Seattle. State-wide coverage was assured through KHQ, Spokane (5,000 watts) and KIRO, Seattle (50,000 watts). Both the red and blue networks were made available through radio stations in the State of Washington.

Motion pictures, slides, and exhibits were shown and displayed at 31 county fairs throughout the state. In the interest of furthering the ever-normal granary plan a special illustrated booklet was issued containing information regarding home storage facilities applicable in this area. Informational contact between the county and state AAA offices was maintained by the AAA News, a mimeographed publication.

Many counties expanded their educational procedures by holding farmer businessmen meetings and farmer community meetings. AAA films were usually shown and literature was made available to all interested parties.

The services of Dr. Robert Montgomery, Professor of Economics at the University of Texas, were engaged for a speaking tour of Western Washington. His talks, which dealt with the economic aspects of the war in Europe, were well received by large audiences at all meeting places.

DEFINITION OF TERMS

In order to more fully understand the terms used in the statistical tables, definitions of those most frequently used are listed:

Farms--1. A work-sheet farm is all farm land having a continuous boundary under the same ownership which is operated by one person and has uniform conditions, such as crops, yields, type of soil, etc.

2. An ACP farm is all land in the work-sheet farm/s operated by one person as a farming unit with respect to the rotation of crops and with work stock, farm machinery, and labor substantially separate from that for any other land.

3. A participation farm is an ACP farm which qualified for and earned a payment in 1941.

Cropland is farm land which in 1940 was tilled or was in a regular rotation. It does not include land broken out of sod, cleared, or from which orchard trees were removed after December 31, 1940.

Payee is a person entitled to receive payment if an application for payment is filed.

Maximum payment is the greatest payment which could be earned by all farms and ranches, even though a work-sheet was not filed.

Gross payment is the earned payment before deductions for county administrative expenses are made.
